

Exercise 2. Functional annotation of ChIP-peaks

1. Using Putty (Windows) or Terminal (Mac) to connect to your assigned computer.

Create a directory `/workdir/myUserID` (replace `myUserID` with you BioHPC ID), copy the test regions, and test region sequences to the working directory.

```
cd /workdir/myUserID
cp /shared_data/ChIP_seq_workshop2_2017/test_results_peaks.narrowPeak ./
cp /shared_data/ChIP_seq_workshop2_2017/*.gz ./
cp /shared_data/ChIP_seq_workshop2_2017/*.bam* ./
```

2. Install Bioconductor packages and annotation

```
R

biocLite("GenomicFeatures")
biocLite("clusterProfiler")
biocLite("org.At.tair.db")

biocLite("rGADEM")
biocLite("ChIPseeker")
install.packages("doMC", dep=T)
install.packages("caTools", dep=T)
install.packages("utils", dep=T)
biocLite("BSgenome")
biocLite("Rsamtools")
```

```
